This is really a 2 section part, one for coding and one for memory. The memory section is the more difficult part and is our main focus here. During the coding section you will simply look at the chart and pick which group an address falls in, A, B, C, or D. The coding section is basically an open book test and as long as you look at the chart, the placing of the addresses is fairly simple. However, during the memory section, once the timed exam has started, you will not be allowed to look back at the groups of addresses. For this sample exam, during the memory section, you may study the following table of addresses for 5 minutes. You need to focus on memorizing which letter group the address appears in. On the exam itself you will simply need to remember which letter group that particular address was in. After 5 minutes put the table of addresses aside and begin the exam. You are not able to look at the table after you have started the exam. The answer sheets are behind the exam.
